Hermite–Hadamard inequalities in higher dimensions

Abstract: In this talk I will discuss some recent results on a generalization of the classical Hermite–Hadamard inequality to convex domains in arbitrary dimension. In particular, we shall be interested in sharp constants and their asymptotic behaviour with respect to the dimension.

Based on joint work with T. Beck, B. Brandolini, K. Burdzy, A. Henrot, J. Langford, R. Smits, and S. Steinerberg.

Der Vortrag findet im Raum 8.526 statt. Interessenten sind herzlich eingeladen!
